start
check user input
if input = start
yes
skip to begin
no
if input = init
init folder
if name = read
read and print result
if name = add
add file to tracks.txt
run folder which creats directory for file and adds first version of file to directory
if name = help
print help text
if name = anything else
print unkown command
begin
check what files to track
rest of stuff is in a infinite loop
run folowing for each file in tracks.txt
open the stored version
open the real one
compare files
different
same
save a new version
wait five seconds
cannot open because file is being used
